Children with chronic health conditions had 56% higher odds of unmet health-related social needs

The Community Health Worker Institute connected 78% of patients to social services and resolved or improved social needs for 98% of patients.

Patients with health-related social needs yielded \$1772 higher costs per year than those without

A rural ambulance service increased coverage for emergency obstetric complications from 18% to 67%

Access to prenatal care can reduce the risk of under-five mortality, while factors including prior death of a sibling increase risk

Integrated health systems can support continuity of care during health crises, like the COVID-19 pandemic
